

Olajumoke Adelosoye

Frontend Developer

Adelosoyeolajumoke9@gmail.com . [GitHub](#)

PROFILE SUMMARY

Frontend Developer with 3+ years of experience building production web application using modern frameworks and technologies. Skilled in optimizing complex dashboards, financial workflow, administrative systems, AI powered products, and responsive user interfaces from product requirements and design specifications. Strong focus on scalable component architecture, state management, API integration, performance, accessibility and maintainable typescript code. Proven ability to lead teams, collaborate effectively, and deliver scalable, high-performing applications. Passionate about transforming ideas into functional and aesthetically pleasing digital solutions.

SKILLS

Node.js | Javascript | Python | Django | Typescript | HTML | Tailwind | CSS | VueJS | Next.JS | Angular | React | Git | GitHub Actions | Agile | Tanstack Query | React Query | Context API | GSAP | Framer Motion | React Three Fiber

WORK EXPERIENCE

Frontend Engineer / Software Engineer Nextprove	2024 – present
- Built and maintained web applications using react, Nextjs, typescript and tailwind css. - Developed reusable, scalable, UI components and frontend architectures for complex product workflow. - Integrated Rest APIs and managed asynchronous server state using Tanstack query/React query. - Implemented application state using Zustand, Redux Toolkit and React Context where appropriate. - Translated product requirements and design specifications into responsive, product-ready interface. - Worked across different environments, including administrative dashboards and AI powered applications	
Frontend Engineer TRX platform	2026
- Developed role-based interfaces and system admin workflow for sellers, buyers, and financiers. - Built administrative transaction console for managing users, invoices, financing activities, factoring, disbursement and approval - Implemented KYC/KYB onboarding and approval workflow, including document handling and user management interface. - Built invoice workflow covering submission, review, financing and related document operation. - Implemented resilient multipart file upload forwarding through backend-frontend layer. - Built analytic and data heavy interfaces for monitoring financial and operational activity.	
Frontend Engineer Ellum AI	2025 – 2026
- Built interface product workflow for AI tools, agents, notification and content management features. - Implemented responsive dashboards and reusable components for complex application states. - Developed administrative pages for monitoring and tracking users, organizations, agent activities, Ai token consumption, subscription and account activity. - Implemented blog management workflow for creating, retrieving editing and managing blog contents. - Integrated an AI powered administrative agent that allows super admin to perform platform operation through natural language instructions. - Connected the AI agent to administrative capabilities including tract users, organizations, creating newsletters, blogs, image generation for blogs, and retrieving platform information.	
Ass. Frontend Lead Drello Inc.	Nov 2024 - 2025
- Supervised a team of frontend developers, ensuring timely delivery of project milestones and adherence to coding standards. - Developed core functionalities for a blog and job platform with integrated Web3 monetization features, utilizing Next.js, Tailwind CSS, and TypeScript. - Collaborated with backend and product teams to integrate APIs and deliver complete product workflows.	

Frontend Developer | HNG Internship

Jun 2024 - Aug 2024

- Built and maintained dynamic user interfaces using HTML, CSS, Tailwind CSS, TypeScript, and JavaScript frameworks such as React and Next.js.
- Partnered with designers to implement responsive and accessible layouts, ensuring consistency across browsers and devices.
- Debugged and optimized code, achieving a 20% performance improvement in deployed applications.
- Contributed to the development of a gaming application and a student homework helper platform, integrating AI-powered features.

Junior Frontend Developer | Freelance

Jan 2023 - Jun 2024

- Designed and developed responsive web pages for clients, leveraging React and Tailwind CSS to meet diverse business needs.
- Implemented reusable components, reducing development time by 15% for subsequent projects.
- Conducted code reviews to ensure quality and alignment with project requirements.
- Integrated third-party APIs for enhanced functionality and streamlined user experiences.

EDUCATION

Ambrose Alli University, Ekpoma, Edo State

Nov 2015 - Jul 2023

Bachelor of Science in Agriculture

PROJECT

Ellumai - Implemented an AI-driven platform allows tracking of all your social media activity, featuring seamless performance and scalability using Next.js.

E.vote - Contributed to the development of an election platform, implementing dynamic features using Next.js.

Deepellum - Developed Agent marketplace for ellum ai.

Fetchit - Currently developing a web application to get Handymen and personal shoppers to help run errands.
